Technical Skills

- **Languages:** Python, SQL, TypeScript, JavaScript, Bash, HTML5, CSS3
- **Frontend:** React Native, Expo, Next.js, React, Vite, Tailwind CSS, Vanilla JS
- **Backend:** PostgreSQL, Supabase, FastAPI, REST APIs, Server-Sent Events (SSE), Pydantic
- **AI / LLM:** Retrieval-Augmented Generation (RAG), Vector Search, Qdrant, Semantic Embeddings, NVIDIA NIM, Ollama, Multilingual NLP (Sarvam AI)
- **Mobile & Geospatial:** GNSS/IMU sensor data, Dead Reckoning, Offline-First Design, Android, MapLibre GL, OSRM
- **DevOps & Testing:** Pytest, Docker, Docker Compose, Git, GitHub Releases, Vercel, Render

Projects

Sahaiy – AI Call-Agent Platform for Vernacular Field Users
Vite 5, Vanilla JS ES Modules, HTML5, CSS3, Supabase (PostgreSQL, Realtime, Auth), Vercel

- Built and deployed a multi-page call-agent platform on Vercel with Hinglish (Hindi/English) UX for users not comfortable with English-only software, realtime database updates, and an env-flow architecture so each deployment is configured rather than re-coded.

IP-SAKTI Sahayak – Verified Records Search for Regulated Ayush IP Data
Python, FastAPI, Next.js, TypeScript, Tailwind CSS, Qdrant, NVIDIA NIM, Supabase, Docker, Pytest

- Built and deployed a citation-grounded RAG platform for patent agents and Ayush practitioners, answering statutory questions (Patents Act Sec. 3(p), Biological Diversity Act ABS) only from the correct jurisdiction's records across seven segregated Qdrant collections (2048-dim NVIDIA Nemotron embeddings).
- Engineered a deterministic citation verifier and a multi-factor confidence scorer (similarity, citation coverage, source authority) so an answer whose citation does not resolve is refused rather than displayed – the auditability a quality record needs.
- Integrated Sarvam AI for queries in 22 Indic languages; containerized with Docker, tested with Pytest.

Bharat Maps – Offline Positioning for GNSS-Denied, Low-Connectivity Field Conditions
React Native, Expo, JavaScript, MapLibre GL Native, OSRM, Overpass API, Android

- Built an offline-first Android navigation app (SIH 2026, PS 168) for sites where the sensor feed drops: a 10 Hz dead-reckoning engine detects a GNSS outage in ≈0.3 s and carries the marker across the gap on a growing uncertainty ellipse, rejoining the fix in 1 s.
- Scored drift against ground truth on a 10 Hz replay benchmark (target <10% over 60 s); shipped MapLibre vector maps, OSRM routing and signed-APK OTA updates behind a pre-publish verification gate.

Routed-Monitoring – Usage Monitoring and Routing Across Shared Resources
JavaScript, Ollama, LLM Routing

- Contributed multi-account Ollama support to the open-source Token Monitor repo, then built a custom fork routing requests across multiple accounts through its UI.
- Extended the UI to track consumption and rate limits across 28+ AI coding tools with multi-device sync.

Education

B.Tech, Computer Science & Engineering (AI & ML) — **Expected Jun 2027**
IPS Academy, Indore – RGPV University — CGPA: 7.12/10 (71.2%), no active backlogs
Coursework: DBMS · Operating Systems · DSA · Machine Learning · Distributed Systems

BS in Data Science & Applications – Foundation Level — **Expected Sep 2026**
Indian Institute of Technology (IIT) Madras — CGPA: 6.2/10

Certifications

Introduction to Internet of Things – NPTEL, IIT Kharagpur *(Elite, 66%, 4 credits)* — Jan–Apr 2026
