linkedin.com/in/shreyash-singh755 | github.com/celestialgeeks | Indore, India

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Frontend & Backend:** Redux Toolkit, Vite, Vanilla JS (ES Modules), FastAPI, Express, REST APIs, Prisma, Supabase, PostgreSQL, MySQL, MongoDB, Redis, Kafka
- **AI / LLM & Automation:** LangChain, RAG, vector search, tool-use agents, agentic workflows, multi-agent orchestration, MCP (Model Context Protocol), NumPy, Pandas, n8n, context engineering
- **DevOps & Tools:** Git, Docker, Kubernetes, GitHub Actions, Vercel, Prometheus/Grafana

Projects

Sahaiy – AI Call-Agent Platform
Vite 5, Vanilla JS ES Modules, Supabase (PostgreSQL, Realtime, Auth)

- Built and deployed a multi-page enterprise call-agent platform on Vercel with Hinglish (Hindi/English) UX, schema.sql bootstrap, and env-flow architecture via src/config/env.js.
- Structured styling with CSS custom properties and BEM naming conventions for a maintainable, themeable design system spanning every page.

Polymarket-Algo – Prediction-Market Latency Arbitrage
Python, LightGBM, K-Means Clustering, Time-Series ML Personal Project

- Identified and exploited a 10–30s pricing lag between Polymarket BTC prediction markets and Binance spot price, building a live signal pipeline to flag mispriced YES/NO contracts.
- Designed a two-stage model – K-Means market-regime detection feeding a LightGBM classifier for YES/NO probability – validated with leakage-free time-series cross-validation to guard against look-ahead bias.

Routed-Monitoring – Multi-Account LLM Router
JavaScript Open-Source Contribution

- Contributed multi-account Ollama support to the open-source Token Monitor repo, then built a custom fork enabling request routing across multiple Ollama accounts directly through its UI.
- Extended the Token Monitor UI to track usage and rate limits across 28+ AI coding tools (Claude Code, Codex, OpenCode) with multi-device sync.

IP-SAKTI Sahayak – AI Legal Intelligence Platform for Ayush IP
Python, FastAPI, Next.js, TypeScript, Qdrant, NVIDIA NIM, Supabase, Docker Solo Project

- Built and deployed a citation-grounded RAG platform for patent agents and Ayush practitioners, delivering statutory analysis and prior-art screening (Patents Act Sec. 3(p)) over seven segregated Qdrant collections (2048-dim NVIDIA Nemotron embeddings) with strict India/International jurisdiction isolation.
- Engineered a deterministic citation verifier, a multi-factor confidence scorer (similarity, citation coverage, source authority), and an SSE stream that filters model reasoning artifacts in real time.
- Integrated Sarvam AI for queries in 22 Indic languages; built a formulation classifier and a Biological Diversity Act ABS compliance checker; containerized with Docker and tested with Pytest.

Education

B.Tech, Computer Science & Engineering (AI & ML) **Expected Jun 2027**
IPS Academy, Indore – RGPV University CGPA: 7.0/10
Coursework: DBMS · Operating Systems · DSA · Machine Learning · Distributed Systems

BS in Data Science & Applications – Foundation Level **Expected Sep 2026**
Indian Institute of Technology (IIT) Madras CGPA: 6.2/10

Certifications

Introduction to Internet of Things – NPTEL, IIT Kharagpur *(Elite, 66%)* Jan–Apr 2026
