DOB 20 Mar 2004 | B.Tech CSE (AI & ML), IPS Academy – RGPV | Enrolment 0808cl231133

Target

Graduate Engineer Trainee (GET), B.Tech 2027 batch – Bhachau / Tarapur / Nagpur. The digital side of fabrication: production and quality **records** that stay accurate, **dashboards** a shift incharge can act on, **IoT sensor data** used to cut downtime, **ERP/BOM traceability**. **Available June 2027; open to all three plants.**

Education

B.Tech, Computer Science & Engineering (AI & ML) **Batch 2027 (Expected Jun 2027)**
IPS Academy, Indore – RGPV University **CGPA 7.12/10 = 71.2%** aggregate, no active backlogs
Coursework: DBMS · Operating Systems · DSA · Machine Learning · Distributed Systems

BS Data Science & Applications (Foundation Level), IIT Madras **Expected Sep 2026**, CGPA 6.2/10
Class XII, MP Board **63%** (2023) **Class X**, MP Board **80%** (2020)

Certifications & Domain Training

Introduction to Internet of Things – NPTEL Online Certification, IIT Kharagpur (MoE-funded), *Elite, 66%, 4 credits; sensors, microcontrollers, IoT architecture and data flow* Jan–Apr 2026

Skills

- **Data, Automation & Reporting:** Python, SQL, PostgreSQL, data cleaning and validation, dashboards and recurring reports, Power BI (academic project), workflow automation
- **Monitoring, Testing & Delivery:** Pytest, Docker, Git and GitHub Releases, alerting on usage and rate limits, pre-release verification gates, technical documentation
- **IoT & Field Systems:** sensor data (GNSS/IMU), Dead Reckoning, Offline-First Design, Android build and deployment, MapLibre GL, OSRM
- **Languages, Web & AI/ML:** Python, TypeScript/JavaScript, HTML5, CSS3, Bash, FastAPI, REST APIs, Supabase, Redis, Kafka; Machine Learning (LightGBM, K-Means), Retrieval-Augmented Generation (RAG)

Projects

Bharat Maps – Positioning when the sensor feed and the network both drop
React Native, Expo, MapLibre GL Native, OSRM, Android | SIH 2026 PS-168, solo

- Field equipment loses its positioning feed in sheds and yards, so I built an offline-first Android system that keeps tracking: a 10 Hz dead-reckoning engine flags an outage in ≈0.3 s, carries the track across the gap on a widening uncertainty band, and rejoins the recovered signal in 1 s with no jump.
- Verified drift against ground truth on a 10 Hz replay benchmark (<10% over 60 s); signed-APK releases clear a pre-publish gate, so untested builds never reach users.

Sentinel – Monitoring a stream and escalating only the real exceptions (B.Tech Major Project)
FastAPI, PostgreSQL, Redis, Kafka, Neo4j, Docker, Kubernetes, Prometheus + Grafana

- Ingests a continuous event stream, scores each event against rule and behavioural models, and routes only genuine exceptions to an operator queue with the record attached – the monitor-and-escalate loop a plant data system needs.
- 25 Pytest cases passing. Sub-500 ms screening and >90% detection are **design targets, not measured results**; repository private, walkthrough on request.

IP-SAKTI Sahayak – Answers that cite the right register, or are refused
Python, FastAPI, Next.js, Docker, Pytest | SIH 2026 PS-45, solo

- Built for statutory queries (Patents Act Sec. 3(p), Biological Diversity Act) in 22 Indic languages, where a wrong source is a wrong answer: seven segregated record sets with jurisdiction isolation, a deterministic citation verifier and a confidence score from similarity, citation coverage and source authority, so an uncited answer is refused; Pytest-covered and documented.
